The names given to this period are confusing. Neoclassicism, 18th Century, Neoclassical, Augustan. Chronologically the period covers from 1660 to around 1800 (exact date is 1798, publication date of Wordsworth's *Lyrical Ballads*). It is a period where counterbalancing and fables are very important. In some ways the country was trying to act like the interregnum and English civil wars had not happened, and there is both a willful suppression of the immediate past and a glorification of the more distant, classical Roman past—which is why it is called the **Neoclassical** period. It is also a period of conscious self-awareness—people looked at themselves and kept asking "Am I playing my role correctly?" After the Great Fire of London, too, they had the chance to totally reinvent their capital and did so in a way that let them mask their past. You need to understand the politics, sociology, and economics of the period if you want to understand its literature.

The first monarch of the period is **Charles II**. He personifies the fictions and fables of the age. He professed to support the Church of England but was secretly Roman Catholic. In public he professed loyalty to his childless queen Henrietta but in public had a series of mistresses, several of whom bore him bastard children (one of whom Charles would make Duke of Monmouth). He was both an intellectual and a fool. The facade of saying one thing and doing another was a major challenge in the period. After the religious Puritan revolution, most Britons were terrified of another religious takeover of government; the rumors about Charles' Catholicism, consolidated by the Titus Oates plot of 1678, led to fears of a Catholic conspiracy and eventually to the 1689 Bill of Exclusion and the 1701 Act of Settlement which permanently prohibited a Catholic from taking the throne of England. (It is still in force today.) When James II inherited his brother's throne and made moves toward imposing Catholic tolerance and Catholic ministers on England, the government rebelled and supported James' eldest Protestant son-in-law, William, from Holland. William and Mary took the throne jointly in the "glorious revolution" of 1688; they were succeeded by Mary's sister Anne, and then eventually by distant German relatives from Hanover. George I was actually 32nd in line to the throne by blood, but the closest male Protestant relative, so he became king on children Anne's death.

Political and Economic Complications

This was a time of civil profitability and military unrest. Britain was involved in a series of commercial wars against the Dutch, French, Austrian, Spanish, and eventually its own American colonies over the lucrative trade opportunities with the New World and with the South Sea. The tension in the line of the great privateer-private trade and the consolidation of British naval supremacy. Like the dot.com boom of the late twentieth century, the late seventeenth and early eighteenth centuries were a time of sudden new wealth based on the beginnings of the stock exchange, of jointed investment schemes like the South Sea Bubble, and all the accompanying speculation and speculation that accompany new found affluence. It is the time of early fiction: the Tories, renaissance old landed wealth, conservatism and the House of Lords.
